Opis produktu

Surge Protector AK-SP-05U 5 Sockets + 2x USB-A 1.8 m

The Akyga® **AK-SP-05U** power strip is used to connect electrical devices to a power source. It is equipped with **five CEE 7/5 sockets**, so you can power many devices at the same time. In addition, **two USB ports** have been placed on top of the surge protector. These will allow you to charge mobile devices such as smartphones or tablets without additional chargers.

One of the most important features of the surge protection strip is the built-in **10 A / 250 V automatic fuse**. Thanks to it, a computer, TV or console connected to the strip is protected from the effects of surges. It also has a built-in **ON/OFF switch**, which enables all devices to be switched off easily and safely. What is more, the power strip is made of durable polypropylene. It is characterised by a high resistance to mechanical damage, which makes it the ideal solution for people who are looking for a safe and durable way to connect devices to the power grid. In addition, the surge protector power strip will also prove its worth as an extension cable. The **1.8 m long cable** will allow you to connect devices located at a greater distance from the socket. Thanks to this, you will not have to limit yourself when placing it.
